

lab shapes of covalent pdf

Lab " Shapes of Covalent Molecules Introduction The type of chemical bond that will form between two atoms can be predicted by calculating the difference in the atoms' electronegativities. When the values of two atoms' electronegativities are far apart, one atom loses one or more electrons to the other and an ionic bond is formed.

Covalent Bonds " The simplest covalent bond is that in H₂ " The single electrons from each atom combine to form an electron pair. " The shared pair functions in two ways simultaneously; it is shared by the two atoms and fills the valence shell of each atom. " The number of shared pairs " One shared pair forms a single bond
